

Operating update for the quarter ended 31 March 2018

Johannesburg, 3 May 2018: Sibanye Gold Limited trading as Sibanye-Stillwater (Sibanye-Stillwater or the Group) (JSE: SGL & NYSE: SBGL) is pleased to present an operating update for the quarter ended 31 March 2018. Financial results are only provided on a six-monthly hasis

SALIENT FEATURES FOR THE QUARTER ENDED 31 MARCH 2018

- Solid Group operating performance with significant benefits from strategic commodity and geographic diversification
- 30% year-on-year increase in Group adjusted EBITDA to R1,575 million (US\$132 million)
- Strong rand impacting negatively on the Southern Africa (SA) region margins
- United States (US) region performing strongly, contributing 60% of Group adjusted EBITDA
- SA PGM operations deliver further operational gains, with significantly improved unit cost performance resulting in positive cash flow
- SA gold operations impacted by poor safety performance with unit costs increasing by 4%
- Net debt: adjusted EBITDA13 at end of March 2018 improved by 8%, decreasing from 2.6x at end of 2017 to 2.4x

For the purposes of calculating the Net Debt: Adjusted EBITDA ratio, Adjusted EBITDA is calculated over the immediately preceding 12 months. Net Debt excludes Burnstone cash and debt due to the non-recourse nature of the financing as explained in the 2017 Annual Financial Statements. Adjusted EBITDA as reported is an accounting calculation based on financial results from the date of acquisition and consolidation.

See "sallent features and cost benchmarks for the quarter ended" on page 6 and 7 for the definition of All-in sustaining cost
The US PGM operations' underground production is converted to metric tonnes and kilograms, and performance is translated into SA rand. In addition to the US PGM operations' underground production, the operation treats recycling material which is excluded from the 2E PGM production, average basket price and All-in sustaining cost statistics shown. PGM recycling represents palladium, platinum, and rhodium ounces fed to the furnace

The Platinum Group Metals (PGM) production in the SA Region is principally platinum, palladium, rhodium and gold, referred to as 4E (3PGM+Au), and in the US Region is principally platinum and palladium, referred to as 2E (2PGM)

The Group reports adjusted earnings before interest, taxes, depreciation and amortisation (EBITDA) based on the definitions in Sibanye-Stillwater's revolving credit facility agreements. Adjusted EBITDA is a proforma number for JSE Listings Requirements purposes. It not an IFRS measure and is for illustrative purposes only and is the responsibility of the directors. For a reconciliation of the components of Adjusted Ebitda, please refer to note 24.10 on page 89 of the 2017 Group Annual Financial Statements available at https://www.sibanyestillwater.com/investors/financialreporting/annual-reports/2017. Adjusted EBITDA margin is calculated by dividing adjusted EBITDA by revenue

OVERVIEW AND UPDATE FOR THE QUARTER ENDED 31 MARCH 2018 COMPARED WITH THE QUARTER ENDED 31 MARCH 2017

During a difficult period, in which margins of the South African mining industry have been negatively impacted by a relatively strong rand (ZAR), the benefits from our strategic commodity and geographical diversification during the last two years are clearly evident.

Another solid operating performance by the SA and US PGM operations offset a challenging quarter for the SA gold operations, which were impacted by a lower average rand gold price and a number of safety related stoppages and operational disruptions (including the power failure at Beatrix). The March quarter is seasonally the most challenging for the SA mining industry, due to a slower start and build-up to normal production levels post the December break. Despite the impact of the strong ZAR on revenues from our SA operations, Group adjusted earnings before interest, taxes, depreciation and amortisation (adjusted EBITDA) for the March 2018 quarter, increased by 30% to R1,575 million (US\$132 million), relative to the comparable quarter in 2017. The Group PGM operations, which benefitted from increasing palladium and rhodium prices, delivered 76% of Group adjusted EBITDA.

Following another good operating performance, the US PGM operations reported adjusted EBITDA of US\$79 million (R942 million), which was 9% higher in dollar terms than the December 2017 quarter and accounted for 60% of Group adjusted EBITDA. The Blitz project continues to deliver ahead of expectations and by 2022 it is anticipated to add 300,000 2Eoz of annual production. This will be the primary driver in lowering AISC at the US PGM operations by approximately US\$100/2Eoz (in real terms), further enhancing the contribution of the US region to Group cash flow.

Adjusted EBITDA from the SA PGM operations of R258 million (US\$22 million) for the March 2018 quarter, increased by 18% relative to the comparable quarter in 2017. Further cost reductions and a 4% higher average 4E PGM ZAR basket price, resulted in the adjusted EBITDA margin increasing from 7% for the March 2017 quarter to 9% for the March 2018 quarter.

The SA gold operations were affected by a poor safety performance, which, together with a 2% decline in the average ZAR gold price received, resulted in adjusted EBITDA declining by 62% from R991 million (US\$75 million) for the March 2017 quarter to R374 million (US\$31 million) for the March 2018 quarter.

An operational review under a sustained strong ZAR environment across Group operations is well advanced. Approximately R550 million (US\$46 million) in non-essential capital expenditure has been deferred, while operational teams are targeting further annualised savings and accelerating further synergies across the Group.

Due largely to the inclusion of the US PGM operations, net debt: adjusted EBITDA of 2.4x at 31 March 2018, was 8% lower than at 31 December 2017. This is well below prevailing covenant levels of 3.5x, as well as below longer term covenant levels of 2.5x. In addition to deleveraging through the Group's cash flows we are considering a number of additional financial initiatives to reduce gearing levels, should it be commercially smart. These initiatives include, amongst others, streaming agreements and recycled inventory pipeline financing. These options are currently being assessed and will be implemented if appropriate. The Group has no need or intention to issue equity in order to reduce debt. Even under significantly more challenging economic circumstances, this remains an unlikely scenario.

The recent refinancing of the US\$ Revolving Credit Facility (RCF), which was upsized from US\$350million to US\$600million on improved terms, reflects the confidence that lenders have in Sibanye-Stillwater's strategy and financial outlook. Utilised shorter term RCF's now constitute only 30% of net debt, which along with the strong support repeatedly shown by our lenders, highlights the improved Group liquidity position and financing flexibility going forward.

SAFETY

Following significant improvements in most safety metrics at the SA operations towards the end of 2017 and during January 2018, the SA region regrettably suffered a number of incidents during February 2018. After a record period of 155 days fatality free for the gold operations, there were three separate incidents at our SA gold operations, in which four employees were fatally injured. At our SA PGM operations two employees were fatally injured in two separate incidents.

Sibanye-Stillwater management and the board express their sincere condolences to the family and colleagues of the deceased employees: Solly Ngobeni, Chicco Dube, Matela Mating, Zanempi Mncwazi, Otshepeng Ramosito and Ntokozo Ntame.

Compared to the same period last year, safety lagging indicators in the SA region showed a 4% regression (3.43 March quarter 2017 vs 3.58 March quarter 2018) in terms of the Serious Injury Frequency Rate and an encouraging 7% improvement (5.84 March quarter 2017 vs 5.46 March quarter 2018) in the Lost Time Injury Frequency Rate (both measured per million hours).

We have intensified our safety efforts, embarking on a Safety Culture Transformation Process, which is aimed at achieving an improved and sustainable safety performance, similar to that being achieved at our US PGM operations.

The Total Recordable Injury Frequency Rate (TRIFR) (measured per million hours) for the US PGM operations increased to 16.6, compared to a record low of 12.7 in the year ended December 31, 2017. Of the 14 recordable injuries in the March quarter six were related to slips, trips and falls. Regional management is refocussing its efforts on eliminating all injuries.

OPERATING REVIEW

SA REGION

SA PGM operations

Attributable 4E PGM production from the SA PGM operations of 286,194 4Eoz for the March 2018 quarter was flat compared to the March 2017 quarter (286,716 4Eoz).

Ongoing cost benefits derived from cost and operational synergies realised in 2017 resulted in an 8% reduction in underground operating cost for the SA PGM operations to R11,032/4Eoz (US\$922/4Eoz). Underground operating costs at Rustenburg were 12% lower year-on-year at R11,044/4Eoz, which is a significant achievement considering that this is net of annual inflationary cost increases. Operating cost increases at the other underground PGM operations were maintained below inflation.

The SA PGM operations recorded adjusted EBITDA of R258 million (US\$21 million) for the March 2018 quarter, at an average 9% adjusted EBITDA margin. Attributable adjusted EBITDA from Mimosa, of approximately R193 million (US\$16 million) is not included in Group adjusted EBITDA, but is equity accounted separately, under sundry items in the Income statement (and will be disclosed in the H1 2018 results).

AISC (which includes sustaining capital expenditure and royalties, net of by-product credits, per ounce of PGM produced) for the SA PGM operations was 4% lower at R10,186/4Eoz (US\$851/4Eoz) compared to the March 2017 quarter, due to ongoing benefits from cost and operational synergies realised in 2017.

Chrome production for the March 2018 quarter was approximately 194,000 tonnes (Rustenburg 135,000 tonnes, Kroondal 59,000 tonnes) compared with approximately 185,000 tonnes (Rustenburg 120,000 tonnes, Kroondal 65,000 tonnes) for the same period in 2017. Realised metallurgical chrome prices decreased from US\$370/tonne for the March 2017 quarter, to US\$223/tonne for the March 2018 quarter.

At the Rustenburg operations, 4E PGM production of 195,578oz during the March 2018 quarter was consistent with the comparable period in 2017. Kroondal, Mimosa and Platinum Mile reported attributable 4E PGM production of 90,616oz for the quarter ended 31 March 2018 which is in line with production for the comparable period in 2017 (90,409oz).

As previously mentioned, due to the impact of the strong ZAR on cash flow in the March 2018 quarter, a decision has been taken to defer all non-essential capital expenditure, with approximately R300 million associated with the construction of a dense media separator and the Rustenburg chrome plant, deferred at the SA PGM operations.

SA gold operations

Production from the SA gold operations declined to 9,068kg (291,500oz) for the March 2018 quarter, 12% lower than the comparable quarter in 2017. The suspension of underground mining at the Cooke operations in late 2017, accounted for 701kg (22,500oz) or 53% of the year-on-year decline. On a like-for-like basis (excluding the Cooke underground operations), production from the SA gold operations declined by 5% or 497kg (16,100oz) compared to the March 2017 quarter. Production was affected by the power failure at Beatrix in February 2018 and safety stoppages following fatal accidents at Driefontein and Kloof. Gold production from surface sources was 84kg (2,900oz) lower year-on-year.

The average dollar gold price received for the quarter ended 31 March 2018 of US\$1,320/oz, was 9% higher than for the comparable period in 2017. However, the average rand gold price received declined by 2%, from R515,998/kg to R507,719/kg, due to the 9% appreciation of the average ZAR relative to the US dollar.

Lower production output resulted in unit operating cost for the SA gold operations increasing by 4% to R444,387/kg (1,155/oz). AISC at Kloof was 1% lower than for the March 2017 quarter, but AISC at Driefontein and Beatrix increased by 14% and 15% respectively due to lower production output.

Adjusted EBITDA for the March 2018 quarter of R374 million (US\$31 million) was 62% lower than for the comparable period in 2017. The SA gold operations contributed 24% to the Group adjusted EBITDA during the quarter.

Compared to the March 2017 quarter, underground production from the Kloof operations increased by 4% to 3,323kg (106,900oz), due to higher underground grades and a significantly higher mine call factor (MCF). Surface production at Kloof increased by 40% to 524kg (16,800oz) due to a 32% increase in throughput as well as a 5% increase in yield.

Underground production of 2,833kg (91,900oz) from the Driefontein operations was 7% lower year-on-year, predominantly due to safety related stoppages, which contributed to a 6% decline in throughput. Gold production from surface sources decreased by 50% to 238kg (7,600oz) due to the depletion of higher grade surface reserves.

At the Beatrix operations, underground gold production was 15% lower at 1,846kg (59,400oz) mainly due to the loss of production shifts following the collapse of both the primary and secondary Eskom power supply lines, which was caused by a severe storm on 31 January 2018. For more information on this event, please refer to the fact sheet on the website at https://www.sibanyestillwater.com/investors/financial-reporting/annual-reports/2017). Production from surface sources for Beatrix declined to 64kg (2,058oz) for the quarter. It is expected that Beatrix will deplete all its surface reserves in the next couple of the months.

Capital expenditure of R699 million (US\$3 million) was 13% lower than for the comparable period in 2017. This is primarily due to the cessation of underground mining at Cooke (accounting for approximately R44 million/US\$3.7million) and the suspension of ore reserve development at Beatrix West (accounting for approximately R22 million/US\$1.8millon).

At the gold operations approximately R250 million of growth capital expenditure has been deferred, primarily at the Burnstone project and the Driefontein drop down project.

US REGION

US PGM operations

The US PGM operations maintained their strong operating performance from 2017. Underground 2E PGM production of 148,549oz, was reported for the March 2018 quarter, at an AISC of US\$632/2Eoz. This compares to 2E production of 147,046oz at an AISC of US\$629/2Eoz for the quarter ended 31 December 2017. Production from the Stillwater Mine (including the Blitz expansion project) comprised approximately 62% of total 2E PGM production.

The Columbus Metallurgical Complex processed 345,821 oz (mined: 154,417 2Eoz and recycled: 191,404 3Eoz) during the quarter, compared to 334,025 oz (mined: 140,628 2Eoz and recycled: 193,397 3Eoz) for the previous quarter ended 31 December 2017. The volume of material processed during the first quarter of 2018 was a new record for the Columbus smelter.

Capital expenditure in the US region for the three month period ended 31 March 2018 was US\$48.0 million, including project capital at Blitz. Capital expenditure for the period includes US\$1.4 million spent on exploration at Altar in Argentina and Marathon in Canada.

Our recycling operation in Columbus, Montana, processed average throughput of 25.8 tonnes of feed material per day for the quarter, compared to 24.7 tonnes per day for the quarter ended 31 December 2017. Total fed recycling ounces of 191,404 3Eoz (including 38,260 3Eoz tolled) for the quarter compare to 193,398 3Eoz (including 45,280 3Eoz tolled) fed ounces during the prior quarter. The US PGM operations as a whole contributing US\$79 million (R942 million) to Group adjusted EBITDA during the quarter, at an average adjusted EBITDA margin of 26%.

Metal prices remained strong during most of the first quarter of 2018, reducing towards quarter end. The average 2E basket price achieved for mined production for the quarter was US\$1,027/2Eoz, 5% higher than the average basket price of US\$980/2Eoz for the December 2017 quarter. The average 3E basket price achieved for recycled ounces sold for the three months was US\$1,001/3Eoz, 8% higher than the average basket price of US\$927/3Eoz for the December 2017 quarter.

OUTLOOK

The outlook for 2018 remains positive. The US and SA PGM operations are expected to maintain the strong operational performance reported in the quarter under review, with operating results from the SA gold operations expected to improve. The ZAR, which is the most significant driver of revenue and margins for the SA operations, has recently begun to depreciate from an average of R11.96/US\$ in the first quarter of 2018 to the current spot price of R12.60/US\$. This bodes well for a further improved financial performance from the SA operations.

Production guidance for the SA gold operations for 2018 is unchanged, with production lost in the March 2018 quarter expected to be recovered during the course of the year. Production is forecast at between 38,500kg and 40,000kg (1.24Moz and 1.29Moz) for the year ending 31 December 2018 with AISC between R475,000/kg and R495,000/kg (US\$1,130/oz and US\$1,180/oz). Following a review of capital expenditure, resulting in the deferral of non-essential capital, the capital expenditure forecast is approximately R250 million (US\$19million) lower than previously guided at R3,250 million (US\$249 million). Sustaining capital relating to ore reserve development will not be cut to ensure the reserves and operational flexibility stays intact.

4E PGM production from the SA PGM operations for the year ending 31 December 2018 is forecast at between 1.1 Moz and 1.15Moz with AISC between R10,750/4Eoz and R11,250/4Eoz (US\$825/4Eoz and US\$860/4Eoz). Capital expenditure is forecast at R1,200 million (US\$92 million), with approximately R300million (US\$22 million) of initially planned R350 million (US\$27 million) project capital deferred.

The dollar costs are based on an average exchange rate of R13.05/US\$.

2E PGM production from the US PGM operations for the year ending 31 December 2018 is forecast to be between 580,000oz and 610,000oz. Due to a better than expected year to date cost performance, AISC guidance has been reduced to between US\$640/2Eoz and US\$680/2Eoz for the full year. Capital expenditure is expected to be up to US\$222 million.

Strategically the Sibanye-Stillwater Group remains well positioned to deliver significant sustainable value to all of its stakeholders, consistent with our vision.

Average exchange rates for the quarters ended 31 March 2018, 31 December 2017 and 31 March 2017 were R11.96/US\$, R13.63/US\$ and R13.21/US\$, respectively. Figures may not add as they are rounded independently.

The Stillwater operations were acquired in May 2017 and, therefore, the US PGM operations' results for the quarter ended 31 March 2017 are not reported. Stillwater's production is converted to metric tonnes. The income and expenses are translated into SA rand. In addition to Stillwater's on-mine underground production, the operation treats various recycling material which is excluded from the underground statistics shown above and is detailed in the PGM recycling table below.

Production per product - see prill split in the table below.
The Group and total SA PGM operations' unit cost benchmarks exclude the financial results of Mimosa, which is equity accounted and excluded from revenue and cost of sales.

The average PGM basket price is the PGM revenue per 4E/2E ounce, prior to a purchase of concentrate adjustment.

- Operating cost is the average cost of production and calculated by dividing the cost of sales, before amortisation and depreciation in a period by the tonnes milled/treated in the same period, and operating cost per kilogram (and ounce) is calculated by dividing the cost of sales, before amortisation and depreciation in a period by the gold produced in the same period.
- period.

 All-in cost excludes income tax, costs associated with merger and acquisition activities, working capital, impairments, financing costs, one-time severance charges and items needed to normalise earnings. All-in cost is made up of All-in sustaining cost, being the cost to sustain current operations, given as a sub-total in the All-in cost calculation, together with corporate and major capital expenditure associated with growth. All-in sustaining cost per ounce (and kilogram) and All-in cost per ounce (and kilogram) are calculated by dividing the All-in sustaining cost and All-in cost, respectively, in a period by the total 4E/2E PGM production in the same period.

Mining - Prill split excluding Recycling operations

Average exchange rates for the quarters ended 31 March 2018, 31 December 2017 and 31 March 2017 were R11.96/US\$, R13.63/US\$ and R13.21/US\$, respectively. Figures may not add as they are rounded independently.

Operating cost is the average cost of production and calculated by dividing the cost of sales, before amortisation and depreciation in a period by the tonnes milled/treated in the same period, and operating cost per kilogram (and ounce) is calculated by dividing the cost of sales, before amortisation and depreciation in a period by the gold produced in the same

period.

All-in cost excludes income tax, costs associated with merger and acquisition activities, working capital, impairments, financing costs, one time severance charges and items needed All-in Cost excludes income tax, costs associated with merger and acquisition activities, working capital, impairments, financing costs, one time severance charges and irems needed to normalise earnings. All-in cost is made up of All-in sustaining cost, being the cost to sustain current operations, given as a sub-total in the All-in cost calculation, together with corporate and major capital expenditure associated with growth. All-in sustaining cost per kilogram (and ounce) and All-in cost per kilogram (and ounce) is calculated by dividing the All-in sustaining cost and All-in cost, respectively, in a period by the total gold sold over the same period.

Corporate project expenditure for the quarters ended 31 March 2018, 31 December 2017 and 31 March 2017 amounted to R89.8 million (US\$47.5 million), R76.3 million (US\$5.7 million), respectively. The majority of this expenditure was on the Burnstone project.

DEVELOPMENT RESULTS

Development values represent the actual results of sampling and no allowance has been made for any adjustments which may be necessary when estimating ore reserves. All figures below exclude shaft sinking metres, which are reported separately where appropriate.

FORWARD-LOOKING STATEMENTS

NOT FOR RELEASE, PRESENTATION, PUBLICATION OR DISTRIBUTION IN WHOLE OR IN PART IN, INTO OR FROM ANY JURISDICTION WHERE TO DO SO WOULD CONSTITUTE A VIOLATION OF THE RELEVANT LAWS OR REGULATIONS OF SUCH JURISDICTION.

This announcement is for informational purposes only and does not constitute or form a part of any offer or solicitation to purchase or subscribe for securities in the United States or any other jurisdiction nor a solicitation of any vote of approval, nor shall there be any sale of securities in any jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such jurisdiction. The shares to be issued in connection with the offer for Lonmin plc ("Lonmin" and the "New Sibanye Shares", respectively) have not been and will not be registered under the US Securities Act of 1933 (the "Securities Act") and, accordingly, may not be offered or sold or otherwise transferred in or into the United States except pursuant to an exemption from the registration requirements of the Securities Act. The New Sibanye Shares are expected to be issued in reliance upon the exemption from the registration requirements of the Securities Act provided by Section 3(a)(10) thereof. This announcement is not a prospectus for purposes of Directive 2003/71/EC (and amendments thereto, including Directive 2010/73/EU, to the extent implemented in any relevant Member State) (the "Prospectus Directive"). In any EEA Member State that has implemented the Prospectus Directive, this announcement is only addressed to and is only directed at qualified investors in that Member State within the meaning of the Prospectus Directive. This announcement is not directed to, or intended for distribution to or use by, any person or entity that is a citizen or resident or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would require any registration or licensing within such jurisdiction. No statement in this announcement should be construed as a profit forecast.

Forward looking statements

This announcement contains forward-looking statements within the meaning of the "safe harbour" provisions of the United States Private Securities Litigation Reform Act of 1995. These forward-looking statements, including, among others, those relating to Sibanye Gold Limited trading as Sibanye-Stillwater ("Sibanye-Stillwater")'s financial positions, business strategies, plans and objectives of management for future operations, are necessarily estimates reflecting the best judgment of the senior management and directors of Sibanye-Stillwater and Lonmin. All statements other than statements of historical facts included in this Announcement may be forward-looking statements. Forward-looking statements also often use words such as "will", "forecast", "potential", "estimate", "expect" and words of similar meaning. By their nature, forward-looking statements involve risk and uncertainty because they relate to future events and circumstances and should be considered in light of various important factors, including those set forth in this disclaimer. Readers are cautioned not to place undue reliance on such statements. The important factors that could cause Sibanye-Stillwater's and Lonmin's actual results, performance or achievements to differ materially from those in the forward-looking statements include, among others, economic, business, political and social conditions in the United Kingdom, South Africa, Zimbabwe and elsewhere; changes in assumptions underlying Sibanye-Stillwater's and Lonmin's estimation of their current mineral reserves and resources; the ability to achieve anticipated efficiencies and other cost savings in connection with past, ongoing and future acquisitions, as well as at existing operations; the success of Sibanye-Stillwater's and Lonmin's business strategy, exploration and development activities; the ability of Sibanye-Stillwater and Lonmin to comply with requirements that they operate in a sustainable manner; changes in the market price of gold, PGMs and/or uranium; the occurrence of hazards associated with underground and surface gold, PGMs and uranium mining; the occurrence of labour disruptions and industrial action; the availability, terms and deployment of capital or credit; changes in relevant government regulations, particularly environmental, tax, health and safety regulations and new legislation affecting water, mining, mineral rights and business ownership, including any interpretations thereof which may be subject to dispute; the outcome and consequence of any potential or pending litigation or regulatory proceedings or other environmental, health and safety issues; power disruptions, constraints and cost increases; supply chain shortages and increases in the price of production inputs; fluctuations in exchange rates, currency devaluations, inflation and other macroeconomic monetary policies; the occurrence of temporary stoppages of mines for safety incidents and unplanned maintenance; their ability to hire and retain senior management or sufficient technically skilled employees, as well as their ability to achieve sufficient representation of historically disadvantaged South Africans' in management positions; failure of information technology and communications systems; the adequacy of insurance coverage; any social unrest, sickness or natural or man-made disaster at informal settlements in the vicinity of some of Sibanye-Stillwater's operations; and the impact of HIV, tuberculosis and other contagious diseases. These forward-looking statements speak only as of the date of this Presentation. Sibanye-Stillwater and Lonmin expressly disclaim any obligation or undertaking to update or revise any forward-looking statement (except to the extent legally required).
