TECHNICAL ASPECTS:

Adopted Factor of Safety

Australian National Committee on Large Dams (ANCOLD) (July 2019)

Stability Assessment and Mitigation Measures (if applicable) s

A detailed stability assessment based on piezocone probing and laboratory test work was conducted in 2022. (KP Reference: RI301-00840/06 Rev A, 24 June 2022)

Additional piezometers including nested piezometers will be installed in 2023 to enhance monitoring. This will include the addition of Vibrating Wire Piezometers (VWPs) to ensure the accuracy of the pore pressures/phreatic levels in the stability analysis.

Dam Breach Assessment

Assessment completed in 2022
 (KP Reference: RI301-00840/06 Rev A, 24 June 2022)

Area of Inundation

Has been identified by EoRs – please refer to Figures 2 & 3

Summary of Human Exposure

Consequence classification has been based on Population at Risk (PAR). Communities have been identified and are being engaged through various means including Community Engagement Forums (CEF)
