## NEWS RELEASE

### AngloGold Posts Strong Full-Year Operating Result and Improved Guidance for 2018

(JOHANNESBURG – NEWS RELEASE) - AngloGold Ashanti achieved guidance for the fifth straight year in 2017 as it achieved a 4% increase in production, progressed the restructuring of its South African portfolio and advanced its brownfield projects according to plan – all whilst generating \$125m in free cash flow before growth investment. Its outlook for 2018 sees improvements across key metrics and also a decision to move ahead with redevelopment of its Obuasi Gold Mine in Ghana, subject to Parliamentary ratification.

Production rose to 3.755Moz at an all-in sustaining cost of \$1,054/oz in the 12 months through to December 31, 2017, from 3.628Moz at \$986/oz in the previous year, despite restructuring in South Africa. Stronger year-on-year operating performance from the International Operations helped to more than offset a lower output from South Africa, where an agreement was reached to sell the Moab Khotsong and Kopanang mines, and where TauTona is undergoing an orderly closure process.

"We delivered a strong production and cost performance, which ultimately funded our reinvestment and restructuring programme," Chief Executive Officer Srinivasan Venkatakrisnan said. "In ensuring we maintain focus on our long-term strategy, our portfolio improvement projects were again executed on time and on schedule, and we continued to make progress on improving safety."

The strong operating and financial performance in 2017 has further strengthened the foundation for AngloGold Ashanti's future. The slate of high-return projects - all with attractive payback periods - is expected to deliver higher-margin production, extend lives and improve predictability at key assets. Production from operations is set to improve in 2018, as are all-in sustaining costs, while capital expenditure is expected to fall despite the decision to reinvest at Obuasi.

Headline earnings for the year were \$27m, or 6 cents per share, compared with \$111m, or 27 cents per share in 2016. Headline earnings for 2017 includes the impact of retrenchment provisions in the South Africa region of \$71m (post-tax) and the provision for silicosis claims of \$46m (post-tax). Excluding the impact of the abnormal items, headline earnings would have increased from \$27m to \$144m.

### BALANCE SHEET

The balance sheet remains robust with strong liquidity and long-dated maturities providing significant financial flexibility. Adjusted earnings before interest, tax, depreciation and amortisation (Adjusted EBITDA) of \$1,483m in 2017 decreased by \$65m, or 4% from the previous year, resulting in a 34%

Adjusted EBITDA margin. Adjusted EBITDA for the year excludes the impact of the South African redundancy costs and impairments but includes the impact of the estimated silicosis provision..

Net debt to Adjusted EBITDA at the end of December 2017 was 1.35 times compared with 1.56 times at the end of June 2017 and 1.24 times at the end of December 2016. Management has successfully maintained financial flexibility by remaining at or below targeted leverage levels, and well below the covenant ratio of 3.5 times which applies under the Company's revolving credit agreements.

Net debt increased marginally by 4% to \$2bn at 31 December 2017, from \$1.92bn at the end of 2016. However, net debt fell by \$150m from the level of \$2.15bn reported at mid year.

## **SAFETY**

The Company's All-Injury Frequency Rate (AIFR), the broadest measure of workplace safety, for the quarter ended 31 December 2017 was 6.67 per million hours worked, a 6% improvement from 7.08 in the previous quarter. Yatela, Siguri, Obuasi, La Colosa, Gramalote, Quebradona and Growth and Exploration achieved an injury free quarter. The AIFR for the year ended 31 December 2017 was 7.53 compared to 7.71 for the year ended 31 December 2016.

Prior to a fatality occurring in July 2017, the Company recorded three consecutive fatality-free quarters for the first time in its history, with the South African ultra-deep mines, achieving 349 fatality-free days. The International Operations set a record of 495 days without a fatality.

Regrettably, the strong start to the year was marred by seven fatalities in the second half, four of which were seismic-related, two were caused by falls-of-ground and one occurred during rail-bound transport operations. Significant effort is being expended to not only understand the cause of each of these incidents, but also the root cause of other high potential incidents that could have resulted in fatalities.

## **SECOND HALF**

Free cash flow of \$162m was generated in the second half of 2017, a 5% decrease on the prior year's second half. Higher operating costs impacted by stronger local currencies, inflation and the payment of the South African redundancy costs, as well as unfavourable working capital movements and higher taxes, were partially offset by higher gold sold. Free cash flow pre-growth investment was \$231m, 4% lower than the previous year.

Production for the second half of 2017 was 2.007Moz, a 15% improvement on the first half of the year and a 7% increase on the six months ended 31 December 2016. Strong performances in the International portfolio, notably in Continental Africa at Siguri and Geita and in Australia at both Sunrise Dam and Tropicana, offset production losses in South Africa due to the orderly closure of Tau Tona and Savuka as well as safety stoppages.

AISC for the second half of 2017 was \$1,038/oz, lower than the \$1,058/oz reported for the second half of 2016, reflecting an increase in gold sales, offsetting the stronger local currencies as well as the impact of lower sustaining capital expenditure on a per ounce basis.

During the fourth quarter of 2017, the group achieved an AISC of \$1,006/oz, a 4% improvement over the fourth quarter of 2016.

## **OUTLOOK\*\***

Production guidance for 2018 year is estimated to be between 3.325Moz and 3.450Moz (includes three months production from Moab and Kopanang at ~30koz per month). Total cash costs are estimated to be between \$770/oz and \$830/oz and AISC between \$990/oz and \$1,060/oz at average exchange rates against the US dollar of 12.79 (Rand), 3.20 (Brazil Real), 0.78 (Aus\$) and 19.61 (Argentina Peso), with

oil at \$62/bl average for the year, based on market expectations. Capital expenditure is anticipated to be lower at between \$800m and \$920m (which includes \$200m to \$250m for growth capital).
